

The plan is simple:

We aim to create datasets that are designed specifically to unlock new capabilities in frontier AI models.

Hyperfocus on utilizing powerful data scaling techniques to leverage our work.

Sell or license these datasets to key AI and robotics labs to steer the direction, ethics, and capabilities of frontier models.

The thesis is predicated on the belief that so much of ML is more art than science. We strongly believe that it will be an artist, with a sensitive intuition on the nature of these models, that will most reliably and consistently manufacture the best data that then unlocks new capabilities in the world of AI.

For investors: [Seed round open](#).

For researchers and labs: [datasets coming soon](#).
